PROFILE

Software engineering and cybersecurity student with hands-on experience shipping AI-powered SaaS platforms, full-stack web and mobile applications, multiplayer game systems, and scalable backend APIs. Skilled across the full development lifecycle — architecture, development, deployment, and monetisation. Strong interest in cybersecurity, embedded systems, and aerospace technology.

TECHNICAL SKILLS

Languages	Python · C++ · JavaScript · TypeScript · SQL · Rust
Frontend	React · React Native · Tailwind CSS v4 · Expo SDK 54 · responsive UI
Backend & APIs	FastAPI · REST APIs · JWT authentication · Supabase · PostgreSQL · Stripe
AI / ML	LLM integration · AI detection & humanisation · Hugging Face · AI API pipelines
Game Dev	Unreal Engine 5 · multiplayer replication · gameplay systems · SDL2 · C++
DevOps & Tools	Git · Docker · Linux · Vercel · Render · EAS Build · CI/CD · Google Play
Monetisation	RevenueCat · Stripe · Google Play Billing · subscription tiers · in-app purchases
Interests	Cybersecurity · embedded systems · aerospace technology · SaaS entrepreneurship

PROJECTS

StealthWriter — AI Detection & Humanisation SaaS

Python · FastAPI · React · React Native · Supabase · Stripe · RevenueCat · Expo SDK 54

- Built a full-stack SaaS platform for AI content detection and text humanisation, deployed as both a web app (React) and Android mobile app (React Native/Expo).
- Developed scalable backend APIs in FastAPI with Supabase authentication, JWT security, and real-time database architecture.
- Integrated Stripe (web) and RevenueCat/Google Play Billing (mobile) for tiered subscriptions, trial limits, and usage-based restrictions.
- Resolved complex React Native dependency conflicts and managed full EAS build and Google Play deployment pipeline.

Multiplayer FPS Prototype — Unreal Engine 5

C++ · Unreal Engine 5 · Multiplayer Networking

- Designed and implemented a multiplayer FPS inspired by tactical shooters (Valorant, CS:GO) — built replicated weapon systems, economy logic, utility mechanics, and multiplayer gameplay architecture.
- Worked extensively with Unreal Engine networking and replication concepts for real-time multiplayer synchronisation.

2D Game Engine — Systems Programming

C++ · SDL2

- Built a 2D engine from scratch using C++ and SDL2 — implemented rendering pipeline, object management, game loop architecture, and low-level systems programming fundamentals.

Additional Projects

- Multiple client and personal projects including QuickKeys (luxury car dealership site in React/Tailwind), agency landing pages, experimental backend systems, and AI integrations — available via GitHub or on request.

EDUCATION

BTEC Level 3 Extended Diploma in Information Technology

Completed

Triple Distinction* (D*D*D*) — Highest achievable grade · Focus: Software Dev, Game Dev, Networking, Cybersecurity
